

**Microsense** has conceptualized, designed and developed a comprehensive, secure, scalable and customizable platform to support WiFi service provisioning at hotels, hotspots, airports and enterprises.

The product has been deployed at leading hotel chains like the Taj and ITC Hotels, at over a hundred coffee shops of the Café Coffeeday group, leading enterprises such as Infosys , and telecom majors including MTNL and BSNL.

**SpotOn** facilitates the management of automated, metered '**Billing & Operational Support Services**' , at Hotspots where Wireless infrastructure is deployed and operated for public access.

## Product Overview

**SpotOn** comprises separate Subscriber and Administrator modules. The software is integrated with a RADIUS server, which enables secure authentication and sign-up and effectively meters usage.

**Spot On for Subscribers** provides an interface to login with a username and password and on successful authentication, to use the internet for a permitted duration of time. The software provides usage analysis for billing and reconciliation and web based customer self-care.

**Spot On for Administrators** provides centralised command and remote control of small to medium scale multi-location Wi-Fi deployments from a centralized administration site. The web centric solution offers simple and easy-to-use metering, billing and services

## Features and Benefits
